SUMMARY

Informatics Engineering graduate who builds web applications end to end, from design to testing, with Laravel/MySQL and Next.js/TypeScript. Experienced in developing an information system for a local government agency during an internship, building a blockchain-based diploma verification system as a thesis project, and launching a live web application used by the public. Highly motivated to keep learning and quick to adapt. Open to Software Engineer, Full-Stack Developer, QA Engineer, and AI Engineer roles.

EDUCATION

Universitas Muhammadiyah Cirebon — Bachelor of Informatics Engineering 2022 – 2026 · GPA 3.39/4.00

Thesis: IjazahChain, a blockchain-based diploma verification system to prevent data forgery.

EXPERIENCE

Software Developer Intern — Secretariat of the Cirebon City Regional Council (DPRD) Oct – Dec 2025

- Developed an Official Travel Information System (Laravel, MySQL) covering authentication and user roles, data management, and reporting, making a previously manual administrative process more efficient.
- Conducted requirements analysis with the team, translated it into features, and tested each feature before use.

PROJECTS

IjazahChain — Blockchain-Based Diploma Verification (Thesis Project) 2026

- Designed a diploma verification system: the diploma status and hash are recorded on an Ethereum smart contract and become valid only after sequential digital signatures from three parties (Academic, Rector, Admin), making it forgery-resistant and publicly verifiable within seconds.
- Passed blackbox testing, OWASP ZAP (no high-risk findings), and Apache JMeter (0% error, response time < 200 ms). Forgery scenarios were successfully rejected by the system.
- Integrated Google Gemini API OCR to speed up diploma data entry.

Laravel · Solidity · Ethers.js · MySQL — github.com/johanhalim7/ijazahchain

StarkBooth — Online Photobooth 2026

- Built a live photobooth app for the public: capture photos from the camera, choose from 30 frame templates, apply filters, then download or share as PNG.
- Processes all photos in the browser (Canvas API), so user photos are never uploaded to a server.

Next.js · React · TypeScript · Tailwind CSS — starkbooth.vercel.app · github.com/johanhalim7/photobooth

Personal Portfolio Website 2026

- Responsive portfolio website showcasing profile, experience, projects, and skills.

Next.js · React · TypeScript · Tailwind CSS — johanhalim.vercel.app

ORGANIZATIONS

Head of MLBB Division — ESI Kota Cirebon (Esports Indonesia) 2025

Organized an MLBB (Mobile Legends: Bang Bang) tournament for the 598th Anniversary of Cirebon City and helped coach and select esports athletes.

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, Bootstrap, HTML, CSS
Backend & Database: PHP, Laravel, REST API, MySQL, ERD design
Testing: Blackbox Testing, test case design, OWASP ZAP, Apache JMeter
Blockchain & AI: Solidity, Smart Contracts, Ethers.js, Google Gemini API
Tools: Git, GitHub, Vercel
Other: Requirements analysis, flowcharts, SDLC, Ionic (basic), technical documentation

CERTIFICATION & LANGUAGES

Indonesian National Professional Certification Agency (BNSP) — Junior Web Programmer (2026)
Languages: Indonesian (Native) · English (Intermediate — comfortable reading technical documentation)
